

Mono 1.9W / Stereo 300mW Power Amplifier

Low Voltage Operation, Shutdown Function

FEATURES

- Operation range: 2.4V ~ 6.5V
- Shutdown Current 18uA at 5V
- Output power, THD+N=1%
- BTL, $R_L=3\Omega$, 2.1W at 5V
- BTL, $R_L=4\Omega$, 1.9W at 5V, 0.83W at 3.3V, 500mW at 2.7V
- BTL, $R_L=8\Omega$, 1.2W at 5V, 0.54W at 3.3V, 350mW at 2.7V
- SE, $R_L=8\Omega$, 300mW at 5V, 125mW at 3.3V, 85mW at 2.7V
- SE, $R_L=32\Omega$, 90mW at 5V, 43mW at 3.3V, 25mW at 2.7V
- Headphone sense
- Unity-gain stable, pop noise free
- Space-saving MSOP10 (enhance thermal pad)

APPLICATIONS

- Desktop computer's sound card
- Portable audio devices
- PDA
- Handheld games
- Communication headsets
- Cross-reference:
SSM2250, LM4853, LM4858

DESCRIPTION

The MS6853 is a low distortion power amplifier that can drive a set of 1.9W of continuous average power into a mono 4Ω bridged-tied load (BTL) or $2 * 90\text{mW}$ into stereo 32Ω single ended (SE) loads headphone. It can automatically switch between mono BTL and stereo SE modes utilizing a headphone sense pin. The BTL configuration eliminates the need for external coupling capacitors on the output in most applications. The unity gain stable MS6853's gain is set by external gain-setting resistors.

The MS6853 has good feature for portable equipment, these features include the low voltage operation, micropower consumption shutdown mode, enhance thermal pad and small package MSOP10, make the MS6853 ideally suited for use in portable digital audio equipments.

BLOCK DIAGRAM

PIN CONFIGURATION

Symbol	Pin	Description
L-IN	1	Left channel input
SHUTDOWN	2	SHUTDOWN places the entire device in shutdown mode when held high. TTL compatible input.
HP-IN	3	Headphone input detection. A logical low sets BTL mode, a logical high sets SE mode.
GND	4	Ground
R-IN	5	Right channel input
R-OUT	6	Right channel output
BY PASS	7	BYPASS is the cap to the voltage divider for internal mid-supply bias. This terminal should be connected to a 0.1- μ F to 10- μ F capacitor C _{BP} .
BTL OUT+	8	Bridged-tied load positive output
VDD	9	Supply voltage
L-OUT/BTL OUT-	10	Left channel output or bridged-tied load negative output

**ORDERING INFORMATION**

APPLICATION INFORMATION

Basic application example

$$\text{DC Gain} = -R_F / R_{IN} = -1$$

Fig.1 A audio amplifier application circuit. (connected to R-OUT)

$$\text{DC Gain} = -R_F / R_{IN} = -1$$

Fig.2 A audio amplifier application circuit. (connected to L-OUT)

SE mode and BTL mode operation

As shown in block diagram and Fig.1, in the SE mode, the MS6853 operates as a high current output dual op amp. Amplifier A1 and A3 are independent amplifiers with an externally configured gain of $A_V = -R_F/R_{IN}$. Amplifier A2 is shut down to a high output impedance state.

In BTL mode, A3 is shutdown to a high impedance state. The audio signal from the R-IN pin is directed to the inverting input of A1. As a result, the L-IN and R-IN audio signals, V_{INL} and V_{INR} , are summed together at the input of A1. A2 is then activated with a closed-loop gain of $A_V = -1$ fixed by two internal resistors. The outputs of A1 and A2 are then used to drive the mono bridged-tied load.

HP-IN operation

The ability of the MS6853 is easily switched between mono BTL and stereo SE modes. The mode is switched by headphone control pin, HP-IN. A logic-high activates the SE mode when a set of headphones plugged into the system, on the other hand, a logical-low to HP-IN activates the BTL mode.

HP-IN pin is a hysteresis control input, the hysteresis range is from 0.65VDD to 0.75VDD. In the case of 5V VDD for MS6853 (the hysteresis voltage for HP-IN is from 3.25V to 3.75V) and 3V VDD for the controlling device, such as MCU, a simple level shift circuit is needed, as shown below.

Thermal pad considerations

The thermal pad must be connected to ground. The package with thermal pad of the MS6853 requires special attention on thermal design. The thermal pad on the bottom of the MS6853 should be soldered down to a copper pad on the circuit board. Heat can be conducted away from the thermal pad through the copper plane to ambient. If the copper plane is not on the top surface of the circuit board, 9 vias of 13 mil or smaller in diameter should be used to thermally couple the thermal pad to the bottom plane. For good thermal conduction, the vias must be plated through and solder filled.

TAPE AND REEL (Unit : mm)

MSOP10

DEMO BOARD

Function description

Label 1: Supply Input

Supply voltage range is 2.7V to 6.5V, the right of jump is positive, the left of jump is negative.

Label 2: Signal Input

Connected to audio signals.

Label 3: Speaker Output

Connected to speaker with 8ohm or 4 ohm

Label 4: Headphone Jack

Used 3.5mm diameter of headphone with 32ohm

Label 5: Shutdown Control

System is active mode when jump is close, system enters shutdown mode when jump is open.

SE mode and BTL mode operation

The headphone controls operational mode. System enters SE mode when headphone jack is empty. When a set of headphone plugged into the jack, the system switched to BTL mode.
